

## **ENVIRONMENT DAY**

**JUNE-5<sup>TH</sup>**

### **Message**

Today all Human beings are celebrating environment day, as we are aware that our survival depends on the environment. We evolved as one of the species on the planet earth among millions of species of plants, animals, and microbes, as a human being.

Now we have converted our self to consumer being and consuming everything whether living or non-living without knowing its worth for survival. If we consider a single plant producing the amount of oxygen daily or in a year and put a tag on it, we will know its worth if the same amount of oxygen we have to artificially produce similarly for other services and products we get from nature.

We are playing a very vital role in degenerating the environment which has affected the existence of the number of species including us. Species are like rivets in the ship or an airplane, which if popped up will disturb the stability and existence, so we are ultimately affecting our existence in nature.

It is now time to act by making individual efforts :

- Be truthful to nature and contend with resources.
- Avoid Artificial living, come close to nature.
- Implementation of learning and being committed to nature and self.
- Purposeful and meaningful life, driven with hope.

Let's take a pledge that It is our responsibility to save our environment and earth and make the possibility of healthy and happy life here.

Thanks
